Configuration Screen

### **Features:**

- Proprietary Color Weather Display console displays weather information and performs computations for wind chill, heat index, and other calculated parameters.
- Designed to be viewed clearly from a distance, the Weather Display utilizes an industrial grade WVGA touchscreen. Seveninch, TFT color LCD screen with 800 x 480 pixel resolution.
- Serial or ethernet connection: Connects directly to weather station with serial port or connect to Weather MicroServer over a network (allowing for data from one weather station to be monitored from multiple display consoles at various locations utilizing an existing ethernet infrastructure).
- Compatible with all CWS weather stations.
- For specialized market and industry requirements, the main screen can be factory-modified.

# **Displays:**

- · Date and time
- Wind chill, dew point, heat index and rain rate
- Barometric pressure trend
- · Rain for today, the week, the month and the year
- Wind averages and gusts
- Min/max values and time for all parameters for the current day and previous day
- 24-hour trend graphs for all parameters
- · Weather data in metric or English units
