

## How to Set Up Weather Underground®

Syncing weather station data from [WeatherMaster™](#) or the [Weather MicroServer™](#) to Weather Underground is an easy way to share and view your weather station information online. Weather Underground comes with many monitoring features, and allows you to view data from stations around the world.

Some of the features available include real-time monitoring, data maps, historical data and graphs, weather cams, and radar. You can also access these features from an iPhone or Android device through their app.

A Weather Underground **Account** and **Station ID Number** are required before you can link your weather station.

### Creating a Weather Underground Account

Join Weather Underground

- Get the most accurate hyperlocal weather
- Real-time alerts for your city
- Add your webcam or personal weather station

Get Started

Many weather stations are compatible with Weather Underground. Check our buying guide to find which station is right for you.

[Browse Stations](#)

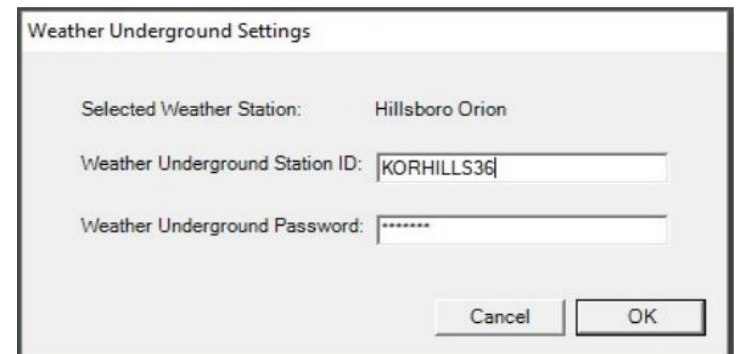

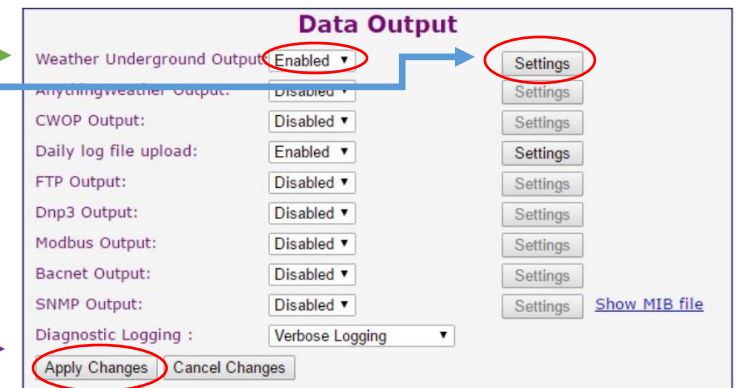

Already have a weather station? [Connect Now](#)

1. Create an account by visiting Weather Underground at <https://www.wunderground.com/signup>.
2. Go near the bottom of their homepage. Under GET STARTED click *Connect Now*, or click this [Link](#)
3. Walk through the steps outlined by entering in the appropriate information about where your weather station is, or will be.
4. Once you submit, you will receive a **Station ID Number**.

## Setting Up with the MicroServer

1. To connect through the MicroServer, login to *Device Admin* and click on *Data Output*
2. For the Weather Underground Output, select *Enabled*.
3. Click *Settings* for the Weather Underground Output
4. Enter your Weather **Station ID** and your Weather Underground **Account Password**, and click *OK*. It will then take you back to the Data Output Screen.
5. Click *Apply Changes*

Be sure to enter in your own Station ID, not the one shown above.

## Setting Up with WeatherMaster

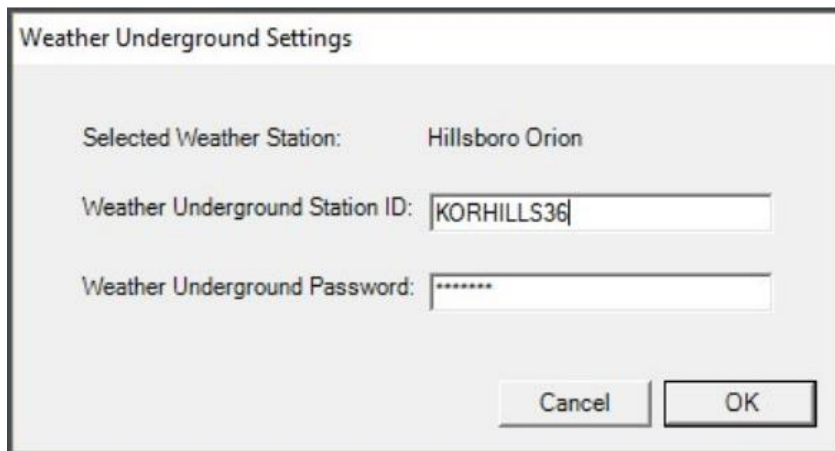

1. To enable the feature in WeatherMaster, click Weather Underground from the *Options* menu.

2. Enter your Weather Underground Station ID and password.

3. Click *OK*.

4. WeatherMaster uploads the weather data every 5-minutes to Weather Underground.

*Be sure to enter in your own Station ID, not the one shown above.*

## Completed Set-Up

Once you have completed one of the Set-Ups, you should now be able to view weather station data in real-time from the Weather Underground website, or mobile app.
