

# How to Set Up Weather Underground®

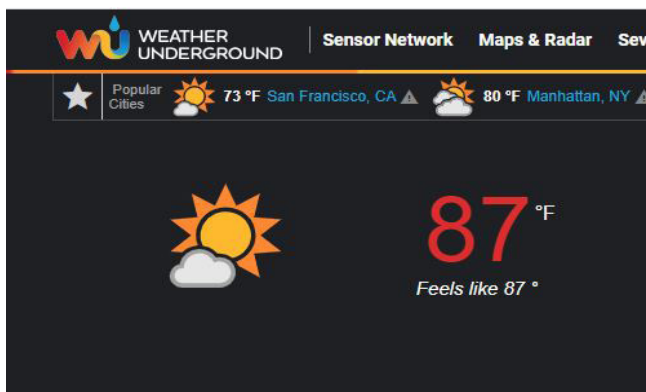

**Syncing weather station data from Weather Master™ or the Weather MicroServer™ to Weather Underground is an easy way to share and view your weather station information online.**

WeatherUnderground comes with a number of monitoring features, and allows you to view data from stations around the world.

Some of the features available include real-time monitoring, data maps, historical data and graphs, weather cams, and radar. You can also access these features from an iPhone or Android device through their app.

Visit <https://www.wunderground.com/dashboard/pws/KORHILLS92> to view our WunderStation and explore what Weather Underground has to offer.

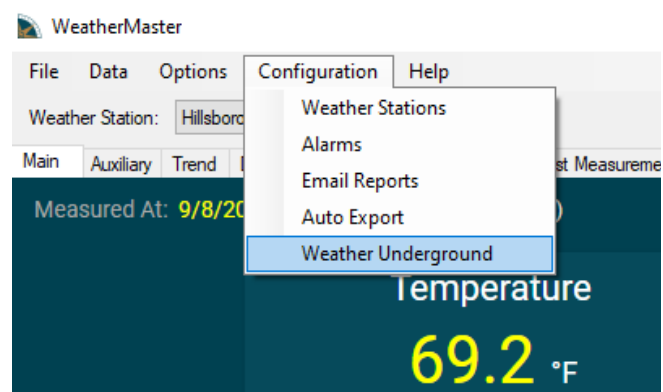

## Weather Underground Account Set-Up

A Weather Underground account and Station ID number are required before you can link your weather station.

- Create an account by visiting Weather Underground at <https://www.wunderground.com/signup>
- Go near the bottom of their homepage. Under GET STARTED click Connect Now, or visit <https://www.wunderground.com/personal-weather-station/signup>
- Walk through the steps outlined by entering in the appropriate information
- Once you submit, you will receive a Station ID number

## WeatherMaster Set-Up

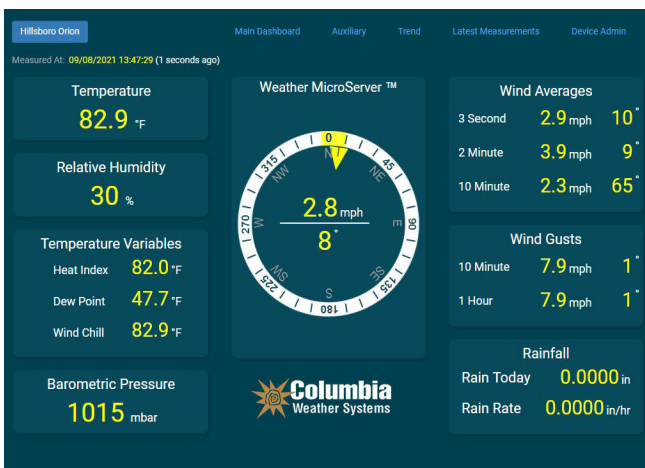

To enable the feature in WeatherMaster, click Weather Underground from the Configuration menu.

- Enter your Weather Underground Station ID and password
- Click OK
- WeatherMaster uploads the weather data every 5-minutes to Weather Underground

# How to Set Up Weather Underground®

## MicroServer Set-Up

- To connect through the MicroServer, login to Device Admin and click on Data Output
- For Weather Underground Output select "Enabled" then click Settings
- Enter the Weather Station ID and Password and click OK
- Click Apply Changes

## Completed Set-Up

Once you have completed one of the Set-Ups, you should now be able to view weather station data in real-time from the Weather Underground website or mobile app.

A CWS weather station viewed from Weather Underground's website is shown.
